SANI ONYX

A VITREOUS MARBLE *for* Your walls

MARIETTA MANUFACTURING CO.
INDIANAPOLIS, IND.
U. S. A.

AWAY BACK YONDER in the dawn-days, so runs the story, a certain tribesman fashioned for himself a dwelling place of uncommon beauty.

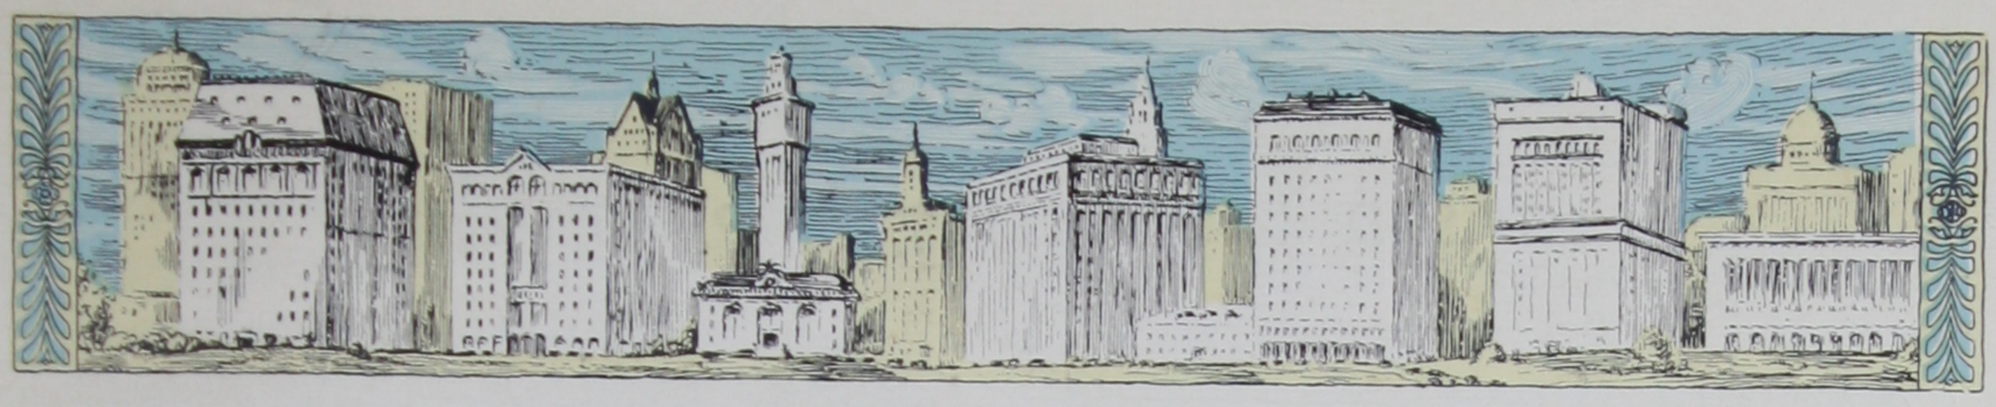
And it came to pass that all of the village folk gathered round to admire and envy. One by one, they sought the services of this Master Maker, offering payment from their stores of food and raiment. Thus, in the fullness of time, this gifted individual became known as The Builder of Homes, and busied himself at his loved labor, while other tribesmen went forth to hunt, or fish, or fight.

And so, they tell us, came the first architect; the founder of our noblest and most enduring art.

What a long, long way we've traveled from those dawn-days to the second quarter of the Twentieth Century! And what a wealth of wondrous materials we have acquired on our journey thru the ages!

Most amazing of all is the progress that has been made in the present generation. We, the makers of SANI ONYX, are frankly proud of the distinction of contributing to this era a magic material that lifts the limitations of convention, and opens an entirely new world of decorative possibilities.

And we are grateful for the privilege of dedicating this book "SANI ONXY for Your Walls," to the architects and builders of America, those modern-minded men who breathe beauty into buildings, and thus share their dreams with all of us.



THE first question, naturally enough, is, "Just what is SANI ONYX?" Let us answer in a single sentence: SANI ONYX is a modern vitreous building material of far greater strength than either marble or tile.

This remarkable present-day product is fused from rock ingredients, at 2600 degrees Fahrenheit. It is as enduring as a wall of solid flint, and will actually outserve the building itself.

Elsewhere in this book you will find detailed suggestions for the application of this product. But let us say here, briefly, that SANI ONYX has an important place in every home and public building. It is extensively used for walls, ceilings and floors; for wainscoting, baseboards and stair risers and treads; for partitions, counters, railings, and for half-a-hundred other purposes that will become apparent as you learn more of the limitless possibilities of the product.

The natural fire-polished surface of SANI ONYX is absolutely uniform, and as softly smooth as glass. Moreover, SANI ONYX is proof against all of the common enemies of other building materials. It does not stain or discolor; nor is it affected by warmth, moisture or salt air. Unlike marble, tile or plaster, it does not crack or check, even under severe strain. Climatic conditions do not alter SANI ONYX in the slightest degree and it is impermeable to water or any liquid, including all acids except hydrofluric.

We cannot too strongly emphasize the fact that SANI ONYX isn't an inferior or makeshift material. It is a superior substance with distinct advantages not shared by any other product. SANI ONYX has come to *supplant*, not to substitute.

SANI ONYX is made in either tile pattern sheets or plain slabs, to meet every construction need. The tile pattern is available in either 3-inch or 6-inch squares. The sheets can be supplied 24 inches, 30 inches, 36 inches and 54 inches wide and up to 120 inches long. You may have your choice of $\frac{5}{16}$-inch or $\frac{7}{16}$-inch thickness.

The plain SANI ONYX slabs can be had in any width up to 54 inches and any length up to 120 inches. They may be had in four thicknesses; $\frac{5}{16}$-inch, $\frac{7}{16}$-inch, $\frac{3}{4}$-inch and 1-inch. Both the tile pattern sheets and plain slabs are available in the six standard SANI ONYX colors.

In order to assure perfect installations of SANI ONYX in every instance, The Marietta Manufacturing Company has established local construction offices in practically every city.

It is the mission of these local construction companies to render practical service to architects and builders. They have experienced workmen and special machinery to make installations that are correct in every detail.

Architects should not hesitate to ask for information concerning this wonderful new building material which is rapidly replacing marble and tile.

Sani Onyx
as a Building Material

No material lends itself so acceptably to any modern type of architecture as Sani Onyx. And none affords so wide a range of pleasing color combinations.

We present, on pages 16 and 17, six of the basic colors shown in combination—blue, green, ivory, gray, white, and black.

Many combinations of these colors are of course possible, such, for example, as blue with either white, gray or ivory for bathrooms, kitchens, etc.

In addition to these six standard colors, new colors and color effects are continually being developed. On succeeding pages of this book you will find a few of these color suggestions set forth in detail. Your own experience with this material will suggest many other pleasing effects.

Sani Onyx now is available in six surface textures—flame glaze, semi-matte, matte, tapestry, polychrome and embossed.

The three latter textures particularly have made possible new and exclusive effects that defy duplication by any other known process.

These rich rare tapestry, polychrome and embossed designs are forcible reminders that this marvelous material is as beautiful as it is practical. No other material, regardless of cost, affords the opportunity for such beautiful effects and color combinations. Sani Onyx provides an appropriate wall and ceiling treatment for every room in every home or public building.

In Sani Onyx you have a new-day material; a material to meet the increasing demand for buildings of distinctive beauty and enduring charm.

Slabs or sheets of Sani Onyx are quickly and easily cut to exact measure by experienced workmen from our local construction offices, and installed according to your specifications.

Let us make it perfectly clear that the examples set forth in this book are *suggestions* only. The resourceful architect will develop many other combinations. Remember that *any* desired design may be cut on Sani Onyx sheets or panels and reproduced in any color or combination of colors.

One of the delightful things about Sani Onyx, you know, is that each day brings new suggestions, and reveals new opportunities for the application of this magic material. The material is so new that we are only just beginning to appreciate its almost limitless possibilities.

The natural fire-polished surface of Sani Onyx serves as a perfect background for attractive decorative colors. These colors are permanent, and are not affected by water, acid or other liquids.

Even after years of the hardest kind of service, you will find the flint-like surface of Sani Onyx as fresh and lustrous as the very day it was installed—and without a trace of stain or discoloration.

There is no more "wear out" to Sani Onyx than there is to rock itself. Only malicious destruction can mar its striking beauty.

SANI ONYX is not only economical in first cost, but serves continuously for a lifetime, without a particle of expense for upkeep or re-decorating. It gives a beauty and permanence to home or public building that is possible with no other material.

SANI ONYX construction offices, in the principal cities, will be happy to aid you in planning the use of this material to the very best advantage. Call upon them or write the home office for samples of SANI ONYX in any of the colors you may desire, as well as working blue prints for a proposed installation. This is a service that is gladly given without cost or obligation to you.

Some Practical Examples Showing the Use of SANI ONYX to Beautify Buildings

In the pages that follow you will observe the actual application of SANI ONYX in various patterns, colors and color combinations, and under widely varying conditions.

Let us emphasize the fact that these are thoroughly *practical* installations, worked out in detail by the architects on our Advisory Staff. These effects may be duplicated anywhere at any time with SANI ONYX stock materials. In the installation of SANI ONYX there are no difficult feats to be accomplished—no baffling problems to be solved. This material will harmonize perfectly with any desired decorative effect.

You will appreciate, of course, that the number of decorative suggestions we can present here is necessarily limited. We could fill several books with similar designs, but our purpose is simply to *indicate* the possibilities of SANI ONYX. Your ingenuity, we are confident, will contrive many attractive combinations and new uses for this magic material.

And the most heartening feature of all is the fact that, once installed, these designs are absolutely permanent. They are not affected by wear and tear, and will give life-time service, without additional expense for repairs or redecorating. The first cost is the last.

Think back for just a moment. How many, many times in your own experience you have seen marble, plaster or tile walls, cracked, chipped, or discolored. This, you know, is not only unsightly, but unsanitary as well.

This is a condition that never occurs with SANI ONYX. This hard-as-rock material will not crack, check or discolor. Moreover, other building materials are porous, while SANI ONYX is impermeable to moisture.

A SANI ONYX surface is as easily cleaned as a china dish. It has a high natural polish, so smooth that practically no dirt adheres to it. Simply go over the surface lightly with a damp cloth, to remove fine particles of dust. That's all the cleaning required!

An exclusive installation feature of SANI-ONYX is our plastic cement, which permits self-adjustment of the slabs to the settling of floors and walls, without cracking or other damage.

It is impractical for the manufacturers of SANI ONYX to send a full line of samples to nearly ten thousand architects in the United States and Canada; however, any architect who is preparing specifications for a building in which SANI ONYX should be specified, will be furnished with necessary samples upon request.

In lieu of a general distribution of samples, we have, under the direction of our consulting staff of architects, prepared this book which we believe will be a valuable addition to your library of building materials.

Realizing that the architect must have access to an almost unlimited fund of information to which he may refer upon a moments notice, we have endeavored to tell the story of SANI ONYX in a few words, relying largely upon the colored plates to tell the story.

THE IDEAL PARTITION FOR ALL PUBLIC BUILDINGS

ILLUSTRATED above is the most modern and approved type of partition that is built. The partition as shown is extended 72 inches above the floor, 54 inches from the wall, and has 35 inches between partitions. Width of stalls may be changed according to floor space.

The illustration shows the use of plain white SANI ONYX slabs for partitions and wainscoting with gray Ashler style walls. The floor is a combination of dull-finished gray and white SANI ONYX.

SANI ONYX is the most practical substance on the market for toilet rooms. It is impervious to moisture and therefore will not stain as does marble and tile.

INSTALLATION: Easily and quickly installed in any number, in any part of the room. Widths and lengths are adjustable to specifications or plumbing. We will furnish the partitions complete with SANI ONYX cut to size, castings, frames, and doors equipped with standard hardware, ready for instant installations. Or will furnish you the special casting, frames, and doors equipped with standard hardware, ready for instant installations.

We will furnish on request blueprint showing the construction details. Our Engineering Department is at your service to estimate the cost of any contemplated toilet partition installation.

Easy to Install

The installation of SANI ONYX is a comparatively simple operation. In order to secure the best results, however, SANI ONYX should be installed over a base which can be water-proofed—that is, over a rough plaster, brick, stone, or concrete wall. By referring to the illustration, you will see the method used in installing SANI ONYX. A plastic cement is used, which "gives" with the settling of the building; this cement never becomes dry or hard and, because of this fact, SANI ONYX walls never crack, a feature which should receive the architect's most careful consideration. In remodeling, SANI ONYX may be readily installed over old plaster walls—Because SANI ONYX comes in large units, it may be installed with amazing speed and ease.
